Overview

GROUNDWORKS AND EXTERNAL IMPROVEMENTS

Baxter Healthcare has appointed Frank Rogers to carry out a range of external improvements works across its Liverpool site.

The firm supplies products to the healthcare industry, the Liverpool site forming one of five bases across the UK. Frank Rogers have been tasked with managing the external improvement of the North West base.

Work initially involves the excavation and removal of all existing flagging, paving and roads to be replaced with new flags, kerbs and block paving. A £100,000 scheme, the project is expected to take some eight weeks from start to completion.

Mike Travis, Contracts Manager of Frank Rogers commented:

"This is fairly large scale private scheme that will be completed within a tight timeframe. We will use our directly employed skilled labour to complete the works, ensuring we cause minimal disruption to the day to day operation at Baxter's."

He added:

"As our business continues to evolve, we are being increasingly recognised as providers of a full spectrum of property solutions be it commercial or residential, internal or external. We have the resources in house to be able to manage almost any property programme and welcome the diversity we are being presented with by both new and existing clients."
